

Paper Portfolio Review — v2 Live

Report generated June 05, 2026 · Live experiment since 2026-06-01 · Simulated only — not investment advice

Executive Summary

Strategy	Description	Final Value	Return	Track	Activity
Max Edge	Ranks by conditional edge (median)	\$98,441.61	-1.56%	4 days	30 trades
Bull Case	Ranks by p90 - best upside scenario	\$98,517.04	-1.48%	4 days	30 trades
Defensive	Ranks by p10 - best downside floor	\$101,103.34	+1.10%	4 days	32 trades

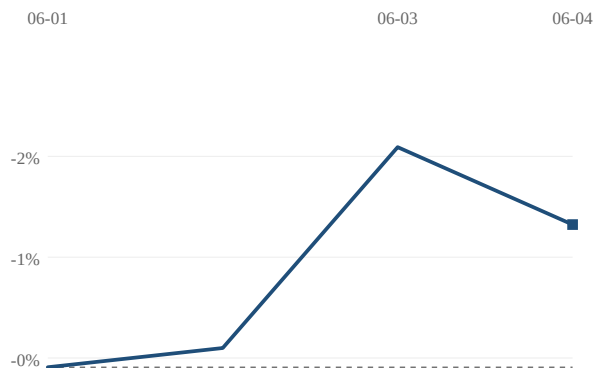

Methodology: Three paper portfolios were seeded with \$100,000 each on 2026-06-01 as a successor to the v1 archive. The same three strategies from v1 are used: **Max Edge** ranks by conditional median minus baseline; **Bull Case** ranks by 90th-percentile forward return; **Defensive** ranks by 10th-percentile floor. The v2 ruleset replaces v1's calendar-based turnover with three signal-aware exit rules: **(1) horizon exit** — each position is sold when its forecast horizon elapses (calendar-day threshold $\approx$ horizon $\times$ 1.4); **(2) signal-decay exit** — sells a name that has dropped out of the current signal list after more than half its horizon has been held; **(3) stay-long renewal** — at horizon end, if the ticker is still in the top quartile of current signals by this portfolio's metric, the entry date is reset rather than the position being sold. Buying is now continuous (no weekly tranche timer): freed cash is deployed on the next build. Equal-weight target of $\sim$ 3.3% per slot and 25% sector cap unchanged from v1.

This report reflects the live v2 experiment as of the report date. Figures will change with each daily build. Use it as a point-in-time snapshot, not a frozen record.
